You are here:

Oct, 18th. 2005

Today two new features went online.

The first is an interactive search function. It suggests common used searchwords and portage filenames while you type. This feature needs javascript activated.

Just type in "gen" (without pressing enter) and you'll get suggestions like app-portage/genlop or app-admin/gentoo-rsync-mirror.

The second feature is the bugzilla database integration into the portage browser. It shows bugzilla entries that match the packet name you are currently viewing.
